

Production Enhancement & Integration Services

In addition to our high quality, American made presses, we are pleased to offer a variety of integration and production enhancement capabilities that can be added to your Pacific machine, including:

Integration Services:

- ✓ **Robotic Integration-** Pacific works with our network of partners to offer robotic integration with our machinery. We even have the capability of designing custom part gripping tools and end effectors to handle the most challenging parts.

✓ **Feeder Integration-**

Plate, coil, or bar feeding into a Pacific Press? Pacific can help with that. With our network of partners, we have the capability of incorporating feeder systems with our machinery. We can also provide press and feeder integration with customer supplied components.

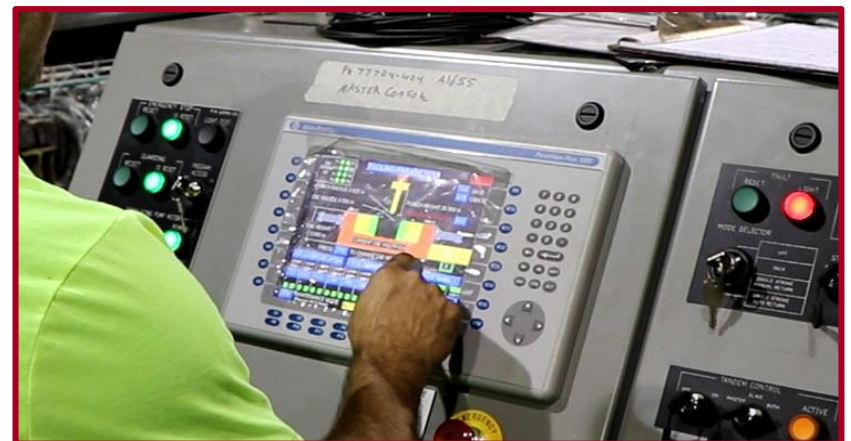

✓ **Conveyor Integration & Material Handling-**

Not only does Pacific build the best pressing equipment in the world, we can help get your material to the press. From steel roller conveyors to servo controlled crowding tables, Pacific can design systems that increase productivity of material movement

✓ **Custom HMI Screens-**

Pacific has the ability to outfit machinery with custom HMI solutions. We can help with product and production specific requests.

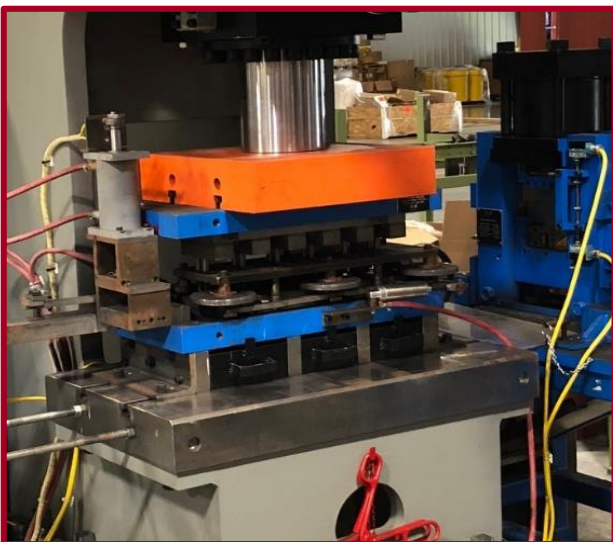

Production Enhancement

- ✓ **Quick Die Change-** Pacific can increase productivity with custom Quick Die Change solutions. Die clamping, die lifters, and carrying consoles are all part of Pacific's repertoire, and we have the ability to custom design systems around your production needs. Down time due to die handling is dramatically reduced with Pacific designed systems.

- ✓ **Custom Tooling-** Pacific partners with leading press die makers to provide a one stop shop for custom forming and stamping operations

Contact us today to learn how any of these value added capabilities can be added to your Pacific Press!
